"Exmor"CMOS Sensor

Exmor sensors give highest picture quality as well as the best sensitivity at bothbrightanddarklocations.

They perform on-chip analog to digital signal conversion and two-step noise reduction in parallel on each column of the CMOS sensor. This can help to reduce the amount of "seen" pixels when you zoominonaphoto.

ONVIF

The Open Network Video Interface Forum (ONVIF) is a global and open industry forum which its goal is to facilitate the development and use of a global open standard for the interface of physical IP-based security products. RedLeafisamember of ONVIF.

Analog Video Output

This old fashioned analog video output helps the installers to quickly and easily apply the required first-run settings to thecamera.

■ The Best Possible Image

Itisalwaysimportanttoproducethebest possible image considering the environmentalconditions.

Our expertise is to process the input light by means of a high quality lens, as ensitive image sensor and a powerful DSP processor to produce a crystal clear output image which is superior to any other solution currently available in the market.

■ Vivid Pictures in Darkness

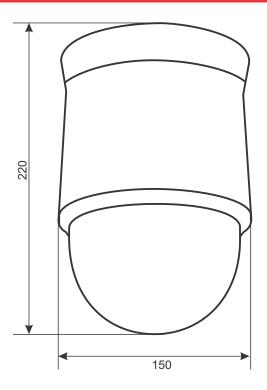

A high percentage of unwanted events happen at night or in low-light conditions. This puts the priority of having a high performance security solution in low light conditions to a very high level.RedLeaf cameras have an unprecedented image quality independent of the lighting conditions, and provide a lucid image at very low lux levels.
